

Construction site management solutions

Rollock's versatile site equipment solutions cover the access control needs of construction sites. When integrated with systems from various operators, the solution can be used for time tracking, personnel traffic, area management, and access and vehicle control for buildings.

Rollock's site devices are integrated with leading construction site management and time tracking systems in the industry.

TIME CLEAN

Construction site time tracking

The Inoptics Time Clean terminal enables time tracking at construction sites.

The device can be connected to the industry's leading time tracking systems.

Use case:

- Time tracking

Key features:

- ✓ NFC keys
- ✓ Valti card
- ✓ Integration with multiple systems

GATE

Access control package for construction site gate

The Rollock Gate controller is a ready-made solution that enables access control for site gates. The Gate package includes a central unit that contains Rollock controllers, a 4G router, switch, power supply, enclosure, and terminal strip.

Readers and the central unit are easy to install and maintain; transferring to another gate is also simple. The Rollock controller controls relay-operated devices, such as construction site gates, overhead doors, and barriers. Access rights are managed via the cloud service or through integration with third-party software.

Use cases:

- Construction site gates
- Barriers
- Sliding gates
- Overhead doors

Key features:

- 4G router
- Light and sound indication
- Remote opening
- Access rights management
- NFC keys / Valtti card
- PIN code
- Integration with multiple systems

DOOR

Door access control

Door access terminals offer an easy and cost-effective way to implement access control on building doors and site offices.

The system allows you to manage personnel access and limit access times. With different device options, access control can be implemented from single doors to large-scale systems. Available with 4G or Ethernet connectivity. Thanks to the advanced REST API interface, the integration devices can be connected to leading construction site management systems.

Key features:

- Light indication
- Remote opening
- Access rights management
- NFC keys / Valtti card
- Electronic day mode
- PIN code
- Integration with multiple systems

Use cases:

- Construction site gates
- Barriers
- Sliding gates
- Overhead doors

DRIVE

Lisence plate recognition for vehicles

Rollock Drive license plate recognition works with a license plate recognition camera to open gates and barriers without a remote or key. The system recognizes the license plate of an approaching vehicle and opens the gate or barrier automatically. The package is delivered complete, including a Rollock gate terminal and camera.

Delivery includes:

- Rollock Access software license
- License plate camera
- Gate terminal with router and 4G modem, IP67

Thanks to the advanced REST API interface, the integration devices can be connected to leading construction site management systems.

Key features:

- Remote access rights management
- Lisence plate recognition
- Mobile key
- Remote opening

Use cases:

- Factory gates
- Warehouses
- Parking area barriers

Accessories:

- Reader with NFC and PIN keypad
